Insights and Recommendations

Insight 1: Significant decline in year-on-year performance

- Observation: The dashboard reports total sales of 993.79K, but current-year sales are 20.29K compared with previous-year sales of 471.22K, representing a 95.7% decline.
- Business implication: This could indicate a significant drop in sales activity, a seasonal effect, incomplete current-year data or a reporting issue.
- Decision: Management should investigate the sales decline by month, product category and business segment. If the decline is genuine, introduce targeted sales campaigns, review pricing and investigate changes in customer demand.

Insight 2: Helmets and Bike Racks are the leading product categories

- Observation: Helmets generate approximately 0.46M in sales, followed by Bike Racks at 0.34M. Hydration Packs contribute approximately 0.11M.
- Business implication: A large proportion of revenue comes from two product categories, making them particularly important to overall sales performance.
- Decision: Prioritize inventory availability, marketing and promotional activities for Helmets and Bike Racks. Investigate opportunities to increase sales of lower-performing categories through product bundling and cross-selling.

Insight 3: Bike Racks and Helmets contribute significantly to profit

- Observation: Helmets generate approximately 196.08K in profit, while Bike Racks generate 140.48K. Both categories are major contributors to profitability.
- Business implication: These categories are not just generating high sales; they are also contributing substantial profit.
- Decision: Maintain competitive pricing and optimize procurement costs for these products. Management should also investigate whether lower-performing categories can achieve better profit margins.

Insight 4: Bikes dominate business segment sales

- Observation: The segment chart indicates that Bikes contribute approximately 82.7% of sales, followed by Components at 14.41% and Clothing at 2.19%.
- Business implication: The business appears heavily dependent on the Bikes segment, which could expose it to risks if demand in that segment declines.
- Decision: Maintain the Bikes segment as a key revenue driver while exploring opportunities to grow Components and Clothing through complementary product offers and targeted marketing.

Insight 5: Sales performance fluctuates throughout the year

- Observation: Monthly sales are relatively strong in February and March, decline considerably in April, and recover towards the end of the year. October, November and December record particularly strong sales.
- Business implication: The business may experience seasonal demand patterns, which can influence inventory requirements, revenue forecasts and marketing activities.
- Decision: Use historical monthly sales trends to develop seasonal sales forecasts, plan inventory replenishment ahead of peak periods and investigate the causes of low-performing months.
