Insights and Recommendations

Insight 1: Overall sales and profit are growing year-on-year

- Observation: Current-year sales are 733.22K compared with previous-year sales of 609.21K, representing a 20.4% increase. Profit also increased by 14.2%, from 81.80K to 93.44K.
- Business implication: The business is experiencing positive year-on-year growth in both revenue and profitability.
- Decision: Management should identify the products, regions and customer segments driving this growth and replicate successful strategies. It should also investigate why profit growth is slower than revenue growth and explore opportunities to improve margins.

Insight 2: Monthly performance shows a recent decline despite annual growth

- Observation: Current-month sales are 83.83K compared with previous-month sales of 118.45K, representing a 29.2% decline. Monthly profit also declined by 12.5%.
- Business implication: Although annual performance is improving, the recent monthly decline could indicate weakening demand, seasonal fluctuations or reduced purchasing activity.
- Decision: Investigate the factors responsible for the decline, particularly changes in product demand, customer purchasing patterns and promotional activities. Management should consider targeted campaigns to improve monthly sales without compromising profitability.

Insight 3: New York City is the leading sales location

- Observation: New York City generates approximately 256K in sales, followed by Los Angeles at 176K, Seattle at 120K, San Francisco at 113K and Philadelphia at 109K.
- Business implication: Sales are concentrated in a few major cities, with New York City making a particularly strong contribution.
- Decision: Prioritize high-performing cities when allocating marketing budgets and planning inventory distribution. Management should also investigate lower-performing locations to identify opportunities for geographical expansion.

Insight 4: The West and East regions lead in sales performance

- Observation: The West generates approximately 0.73M in sales, followed by the East at 0.68M, Central at 0.50M and South at 0.39M.
- Business implication: There is a noticeable difference in sales performance across regions, suggesting variations in customer demand and market opportunities.
- Decision: Maintain investment in the West and East while investigating the factors limiting sales in the Central and South regions. Regional marketing campaigns and location-specific product strategies could help improve performance.

Insight 5: Consumer customers contribute the largest share of profit

- Observation: Consumer customers contribute 134.12K (46.83%) of total profit, Corporate customers contribute 91.98K (32.12%), while Home Office customers contribute 60.30K (21.05%).
- Business implication: Consumer customers are the largest contributors to profitability, but Corporate and Home Office customers collectively
